                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                 Lipid-associated proteins (LIPAP) can be used for treating or preventing disorders associated with decreased expression of LIPAP, preventing disorders associated with decreased expression of LIPAP, and to raise for screening for agonists or antagonists of LIPAP are useful specific antibodies. Antagonists and antagonists of LIPAP are useful for treating diseases associated with reduced or increased levels of liPAP, e.g. cardiovascular, neurological and gastrointestinal LIPAP, e.g. cardiovascular, neurological and gastrointestinal acid encoding LIPAP are useful for detection of full length coding acid encoding LIPAP are useful for detection of full length coding diagnosis or monitoring. Nucleocides encoding LIPAP are used for compounds that specifically modify LIPAP are used for the respection of LiPAP, in gene therapy, as a source of for recombinant production of LiPAP, in gene therapy, as a source of for recombing of LIPAP-associated disease by immunoassay, as antagonists, in competitive drug screens and for affinity purification of natural LIPAP.

The ORFX which represent the human ORFX open reading frames 1 to 3161. The ORFX which represent the human ORFX open be the representation; antiparkinsonian; nootropic; immunosuppressant; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; osteopathic; hypotensive; dermatological; immunosuppressant; antidiabetic; hypotensive; dermatological; antibunosuppressive; antiinflammatory; antibacterial; antiviral; antibungal; antitheumatic; antiinflammatory; antibacterial; antiviral; antibungal; antitheumatic; cantiinflammatory; antibacterial; antionis can be used to a predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating can be used to express ORFX associated disorder. The proteins and nucleic acids may be used to treat cancers, vectors. The proteins and nucleic acids may be used to treat cancers, reclorer, who disorders, neurodegenerative disorders, neurodegenerative disorders, neurolesses, cardiovascular disease, diabetes mellitus, erythematosus, severe combined immunodeliciency (SCID), AIDS, viral, or tungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, coagulation; to inhibit thrombosis; and as a contraceptive.
                                                Human; open reading frame; ORFX; detection; cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; vulnerary; antipsoriatic; antiparkinsonian; nootropic; natidiabetic; anticonnostimulant; thrombolyvic; coagulant; vasotropic; antidiabetic; antiviral; antibacterial; antifungal; immunosuppressive; antiinflammatory; hypotensive; dermatological; immunosuppressive; antiinflammatory; antiviral; antibacterial; antifungal; antihematic; antithyroid; antitudaemic; gene therapy; cancer; proliferative disorder; hypertension; cardiovascular disease; diabetes mellitus; hypothyroidism; SCUD; ADD; cardiovascular disease; diabetes mellitus; hypothyroidism; SCUD; ADD; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound; bone damage; cartilage damage; antiinflammatory disease; coagulation; thrombosis; contraceptive; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acids and peptides derived from open reading frame X, useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of
                                                                                                                                                                                                                                                                     3605

The present sequence encodes a human EPLIN (epithelial protein lost in neoplasm) beta isoform. The specification also describes EPLIN-alpha.

C multiple common human tumour types. BPLIN nucleic acids and proteins are used in screening assays to detect molecules that specifically bind to used in screening assays to detect molecules and thus have potential use EPLIN nucleic acids, proteins or derivatives and thus have potential use c as agonist or antagonist of EPLIN, in particular molecules that affect c ell proliferation. Thus the assays are useful for screening aclecules of development. EPLIN nucleic acids, proteins are useful for detecting a development. EPLIN nucleic acids, proteins are useful for detecting a c development. EPLIN nucleic acids, proteins are useful as marker that c useful in gene therapy techniques. EPLIN is useful as a marker that can be diagnostically, prognostically and therapeutically used over controlled of a cell proliferative disorder associated with EPLIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CTCAGGTCACCTCCTGAAGCCCTCGTTCAGGGTCGATATCCCCACATCAAGGACGGTGAG 583

The present sequence encodes a human EPLIN (epithelial protein lost in neoplasm)-alpha isoform. The specification also describes EPLIN-beta.

CC EPLIN is a tumour suppressor protein, whose expression is altered in comultiple common human tumour types. EPLIN nucleic acids and proteins are used in screening assays to detect molecules that specifically bind to complete an advance or detect molecules that specifically bind to complete an advance or detecting a sagonst or anagonist of EPLIN, in particular molecules that affect call proliferation. Thus the assays are useful for screening molecules (with potential utility as anticancer drugs or lead compounds for drug development. EPLIN nucleic acids, proteins are useful for detecting a cell in polliferative disorder in a subject. EPLIN polynucleotides are useful in gene therapy techniques. EPLIN is useful as a marker that can be diagnostically, prognostically and therapeutically used over the course of a cell proliferative disorder associated with EPLIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ب
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           361
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            218

The invention relates to human nucleic acids (AALS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, the encoded polypeptides (AAM38642-AAM42213) with nootropic, the encoded polypeptides are useful immunosuppressant and cytostatic activity. The polymucleotides are useful for the invention may be used to treat diseases of the peripheral nervous of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous cystem diseases, such as localised neuropaths and central nervous system diseases, such as letteral sclerosis, and Shy-Drager Syndrome. Other uses include the activity, chamber as: Immune system suppression, and thrombolytic activity, chamber activity, hemotactic/chemokinetic activity, haemostatic and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and construction may be activity, arthritis and inflammation, leukaemias and construction may be activity arthritis and inflammation, leukaemias and construction may be activity and inflammation, leukaemias and constructions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ô

New isolated polynuclectide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity

English Claim 1; SEQ ID No 8550; 103pp;

The invention relates to isolated polynucleotide (I) and comparison probes, colypeptide (II) sequences. (I) is useful as hybridisation probes, complymerase chain reaction (PCR) primers, oligomers, and for chromosome compares enables and in recombinant production of (II). The colymcleotides are also used in diagnostics as expressed sequence tags polynucleotides are also used in diagnostics as expressed sequence tags. (C for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving cuantitating a polypeptide in tissue, as molecular weight markers and as considered in the bill of the useful for treating a food supplement. (II) and its binding partners are useful for treating in aging of sites expressing (II). (I) and (II) are useful for treating in aging of sites expressing (II). (I) and (II) are useful for treating to disorders involving aberrant protein expression or biological activity. Cresponsible for genetic disorders or other traits to assess biodiversity cand to produce other types of data and products dependent on DNA and cand produce other types of data and products dependent on DNA and cand agnostic coding sequences. AAS4197-AAS45454 represent novel human can exequence data for this patent did not appear in the printed consecution, but was obtained in electronic format directly from WIPO can fire.)

Human, secreted protein; gene, ss, nutritional supplement; haemophilia; viral infection, bacterial infection, fungal infection, diabetes, asthma; autoimmune disorder; rheumatoid arthritis; multiple sclerosis; tumour; autoimmune thyroiditis; allergic reaction, neurodegenerative disease; Alcheimer's disease; parkinson's disease; liver fibrosis; cancer; ulcer; coagulation disorder; inflammatory disorder; Crohn's disease; incision; tissue regeneration; wound healing; burn; haematopoiesis; moision; myeloid cell deficiency; lymphoid cell deficiency. Human cDNA encoding secreted protein #399 ВĐ 2749 (first entry) ABK35261 standard; cDNA; 08-MAY-2002 ABK35261; SULT

The invention relates to 592 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted a variety of human tissue sources and which encode novel secreted compared to the polynucleotides can be used as probes for the proteins. The polynucleotides can also be used as nutritional supplements of dentification and isolation of full length cDNA and genomic DNA. The proteins are useful in the treatment of various immune deficiencies. The proteins are useful in the treatment of various immune deficiencies and disorders such as viral infections, bacterial infections, fungal infections, autoimmune disorders (e.g. rheumatorid arthritis, multiple infections, autoimmune thyvoiditis and diabetes) and allergic reactions sclerosis, autoimmune thyvoiditis and diabetes) and allergic reactions conditions (e.g. asthma). They are also useful for treating conditions (e.g. halzheimer's disease, parkhison's neurodegenerative diseases (e.g. halzheimer's disease, parkhison's disease), liver fibrosis, coagulation disorders (e.g. haemophilia), disease), liver fibrosis, coagulation disorders (e.g. haemophilia) of useful for tissue regeneration, for wound healing and in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating burns, incisions and ulcers. The proteins are also useful for regulating myeloid or lymphoid cell deficiencies. Sequences ABK34863-ABK35454 represent polynucleotides of the invention. Five hundred and ninety two polynucleotides derived from a variety of human tissue sources which encode secreted proteins, useful for treating immune deficiencies and disorders such as autoimmune disorders Resnick Sequence 2749 BP; 885 A; 535 C; 593 G; 736 T; 0 other; HOWES SH, Agostino MJ, Claim 1; Page 279-280; 372pp; English × Fechtel 29-MAR-2001; 2001WO-US10224. 06-APR-2000; 2000US-195582P.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel human nucleic acid sequences from normal breast tissue which have cytostatic activity. The nucleic acid sequences can be used to produce and isolate full-length gene sequences. They can be used to express proteins, which can be used as tools to find an activity against breast cancer. The sequences can be used in sense or activity against breast cancer. The sequences can be used in sense or therapy to treat breast cancer and for treating illnesses associated with fat metabolism. AA233541-Z33610 represent expressed sequence tags described in the method of the invention.

The polynucleotide sequences given in AACS9449 to AACS9497 encode the human secreted proteins given in AAB34092 to AAB34140. AAB34141 to human secreted proteins given in the exemplification of the present homologous to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissue and cells the genes are expressed in. Examples of activities include: antiarthritic; immunosuppressive; antirheumatic; antipoliferative; antiarthritic; immunosuppressive; antirheumatic; antipoliferative; cytostatic; cardiant; vasotropic; cerebroprotective; notropic; cerebroprotective; notropic; erebroprotective; notropic; and vulnerary. The polynucleotides and polypeptides can be used to and vulnerary. The polynucleotides and polypeptides can be used to antipological condition or susceptibility to a in diagnosing a pathological condition or susceptibility to a in diagnosing a pathological condition or susceptibility to a pathological condition. Disorders which are diagnosed or treated include pathological condition. Disorders which are diagnosed or treated include pathological condition or susceptibility to a caused by disorders, anglogenesis, nervous system disorders, cerebrovascular cancer of the breast or liver, cardiovascular disorders, infections caused bacteria, viruses and fungi and ocular disorders. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to transplantation, for supporting cell culture of primary tissues, to transplantation, for supporting cell culture of primary tissues and in chemotaxis. The polypeptides an also be used a food additive or preservative to increase or decrease storage as a food additive or preservative to increase or decrease storage in the exemplification of the present invention.

New nucleic acid molecules encoding 49 human secreted proteins for

```
Compute sequences AAC91479 - AAC91527 represent cDNA encoding human secreted proteins AAB51875 - Sequences AAB51876 - AAB51875 Sequences AAB51876 - AAB51875 Sequences AAB51876 - AAB51875 Sequences AAB51876 - AAB51875 Sequences AAB51876 - AAB51877 represent alternative polypeptides encoded by the genes and compared actis sequences with which they share homology. The genes and proteins have activities dependent on the tissues and cells in which they are expressed. Examples of their activities include immunosuppressive; articles, include; fungicide, opthalmalogical; and agonists and agonists and sporterial; article creating, preventing and/or diagnosing diseases and disorders such a proteins, polymuclectides, antagonists and agonists may be useful in proteinmune diseases e.g. rheumatoid arthritis, hyperproliferative currently nervour system disorders e.g. crebtral ischaemia, cerprovascular disorders e.g. crebtral ischaemia, anglogenesis, nervous system disorders e.g. Alzheimer's disease.

C e.g. corneal infection. The polypeptides can also be used to aid wound cell may neft entill proliferation, to prevent skin aging due to callude of martial organs before transplantation, for supporting cell computer, tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to carbonydrate, vitamins, minerals, cofactors and other nutritional components. Oligonucleotides AAC93470 and other nutritional components. Oligonucleotides AAC93470 and other nutritional components. Oligonucleotides AAC93470 and other nutritional components.

The invention relates to human nucleic acids (AAIS7798-AAI61369) and CC the encoded polypeptides (AAM38642-AAM46213) with noorcopic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide and central nervous system disease, such as contained the contained system or polynucleotide the orthogen of the activity, chemotectic orther uses include the cutilisation of the activity, chemotectic/chemoKinetic activity, haemostatic or and thrombolytic activity, cancer diagnosis and therapy, drug screening, contained orther activity, arthritis and inflammation, leukaemias and contained the contained or the contained or the contained or the contained or the contained or the contained or the contained or the contained or the contained or the contained or the contained or the contained or the contained or contained or the contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or contained or 
                                                                                                                 cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

```
the present invention describes primer sets for synthesising sour the present invention describes primer sets of comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination of monorleotide comprises a 3'-end sequence complementary to the sequence and an oligonucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence. Where the combination of the S'-end sequence and an oligonucleotide sequence, where the comprises at least 15 nucleotides and the combination of the S-can sequence 3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDMAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the full-length cDMAs. The primers are also useful for the CDMAs and AMH13633 to AMH13633 to AMH13632 to AMH13632 to AMH13632 to AMH13632 to represent human acid sequences; and AMH13632 to AMH13632 or represent human ends of sequences; and AMH13632 to represent configuration and or all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1480

"Sterol regulatory element binding protein hSREBP-3"

Location/Qualifiers 169..154

/\*tag= a /product=

```
The invention relates to a novel human sterol regulatory element binding protein 3 (hSREBP-3) expressed in human normal hypothalamic tissue and its coding sequence. Also described is the process for preparing the protein and nucleic acid sequence, and the method for detecting hSREBP-3 nucleic acid sequence and polypeptides. The present sequence represents the coding sequence of human hSREBP-3 as described in the invention.
                                                                                 cDNA encoding human sterol regulatory element binding protein
                                                                                                                           regulatory element binding protein 3; hSREBP-3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (NATU-) NATURAL HUMAN GENOME NANFANG RES CENT
